

## WHO'S NEARBY · FEATURE GUIDE

# Explore, connect, and manage access

A visual guide to the app's discovery, privacy, payments, raffle, community-message, and admin/VIP features. The admin/VIP list is now persisted in Supabase rather than relying on a hard-coded secondary-admin exception.

**Screenshot note:** These are illustrative UI screens rendered with fictional sample data. They are not captures of signed-in production sessions and do not show real users or account details.

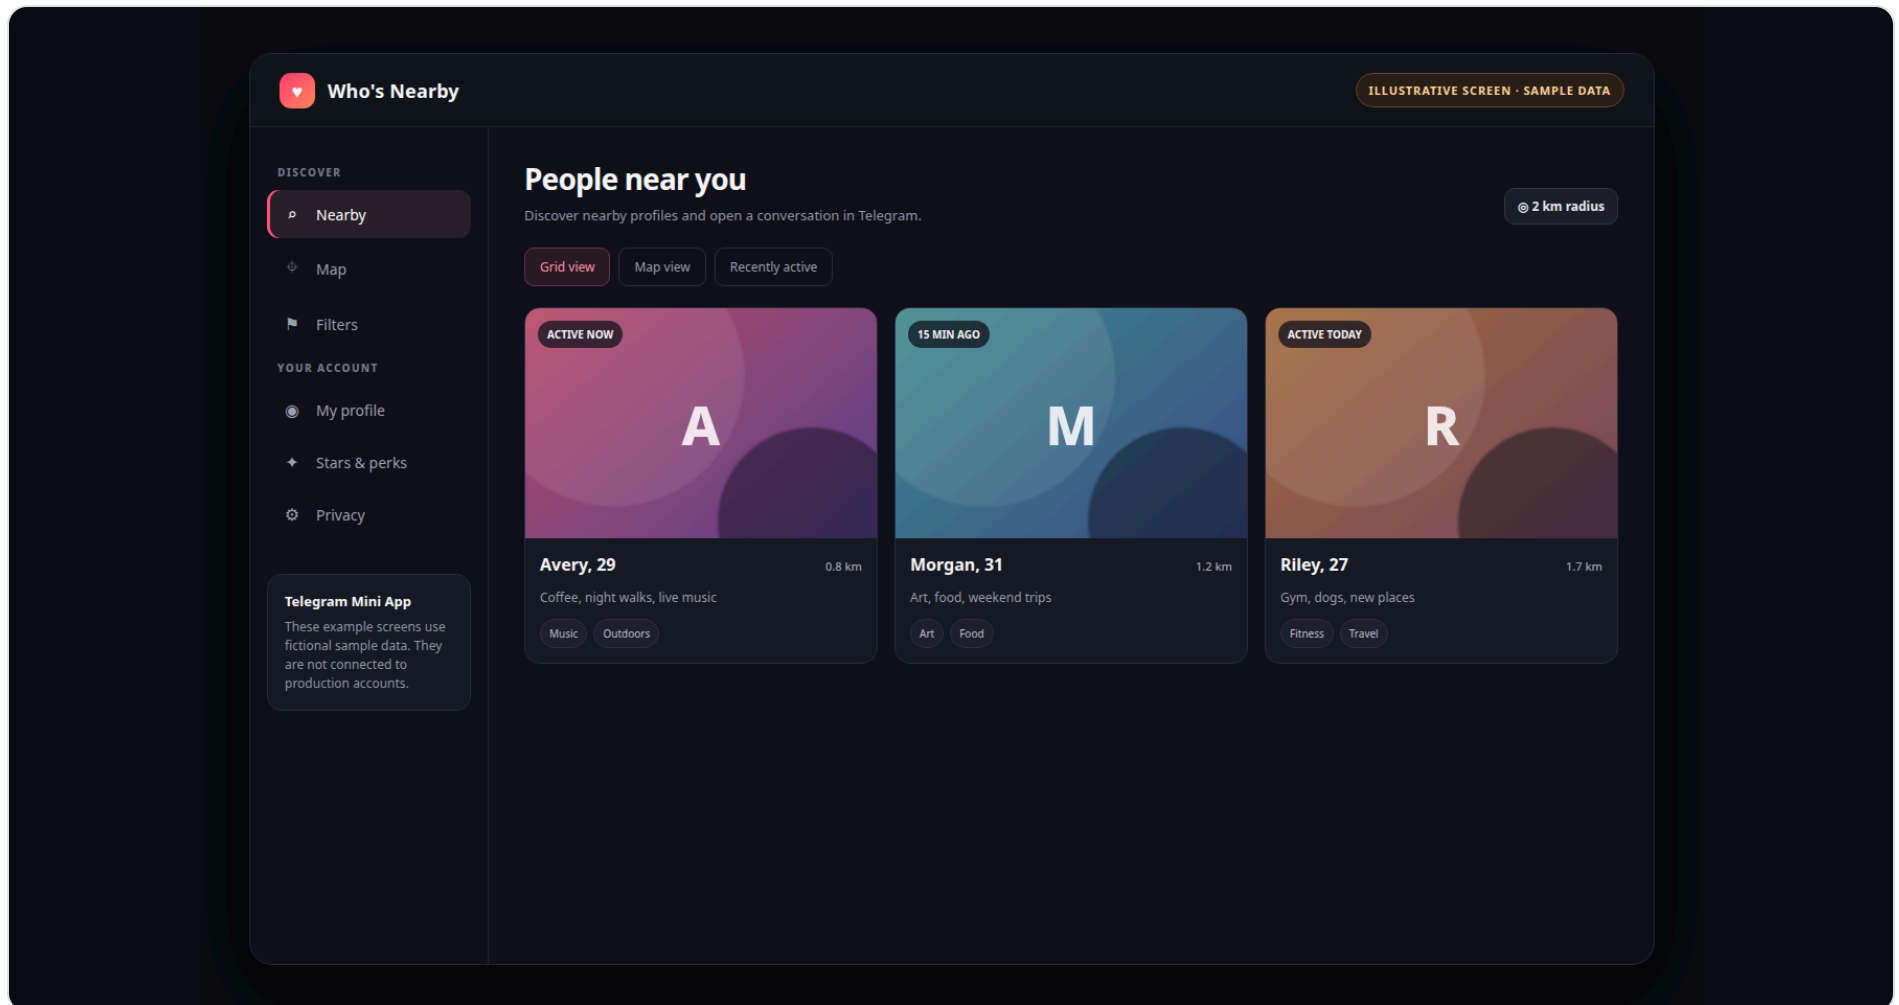

Production access and availability depend on Telegram login, account eligibility, and current entitlements.

## 01 · DISCOVERY

Illustrative · sample data

## Nearby grid

Browse nearby profiles in a card grid. Cards show derived age, rounded distance, activity, and profile interests; exact coordinates are not shown.

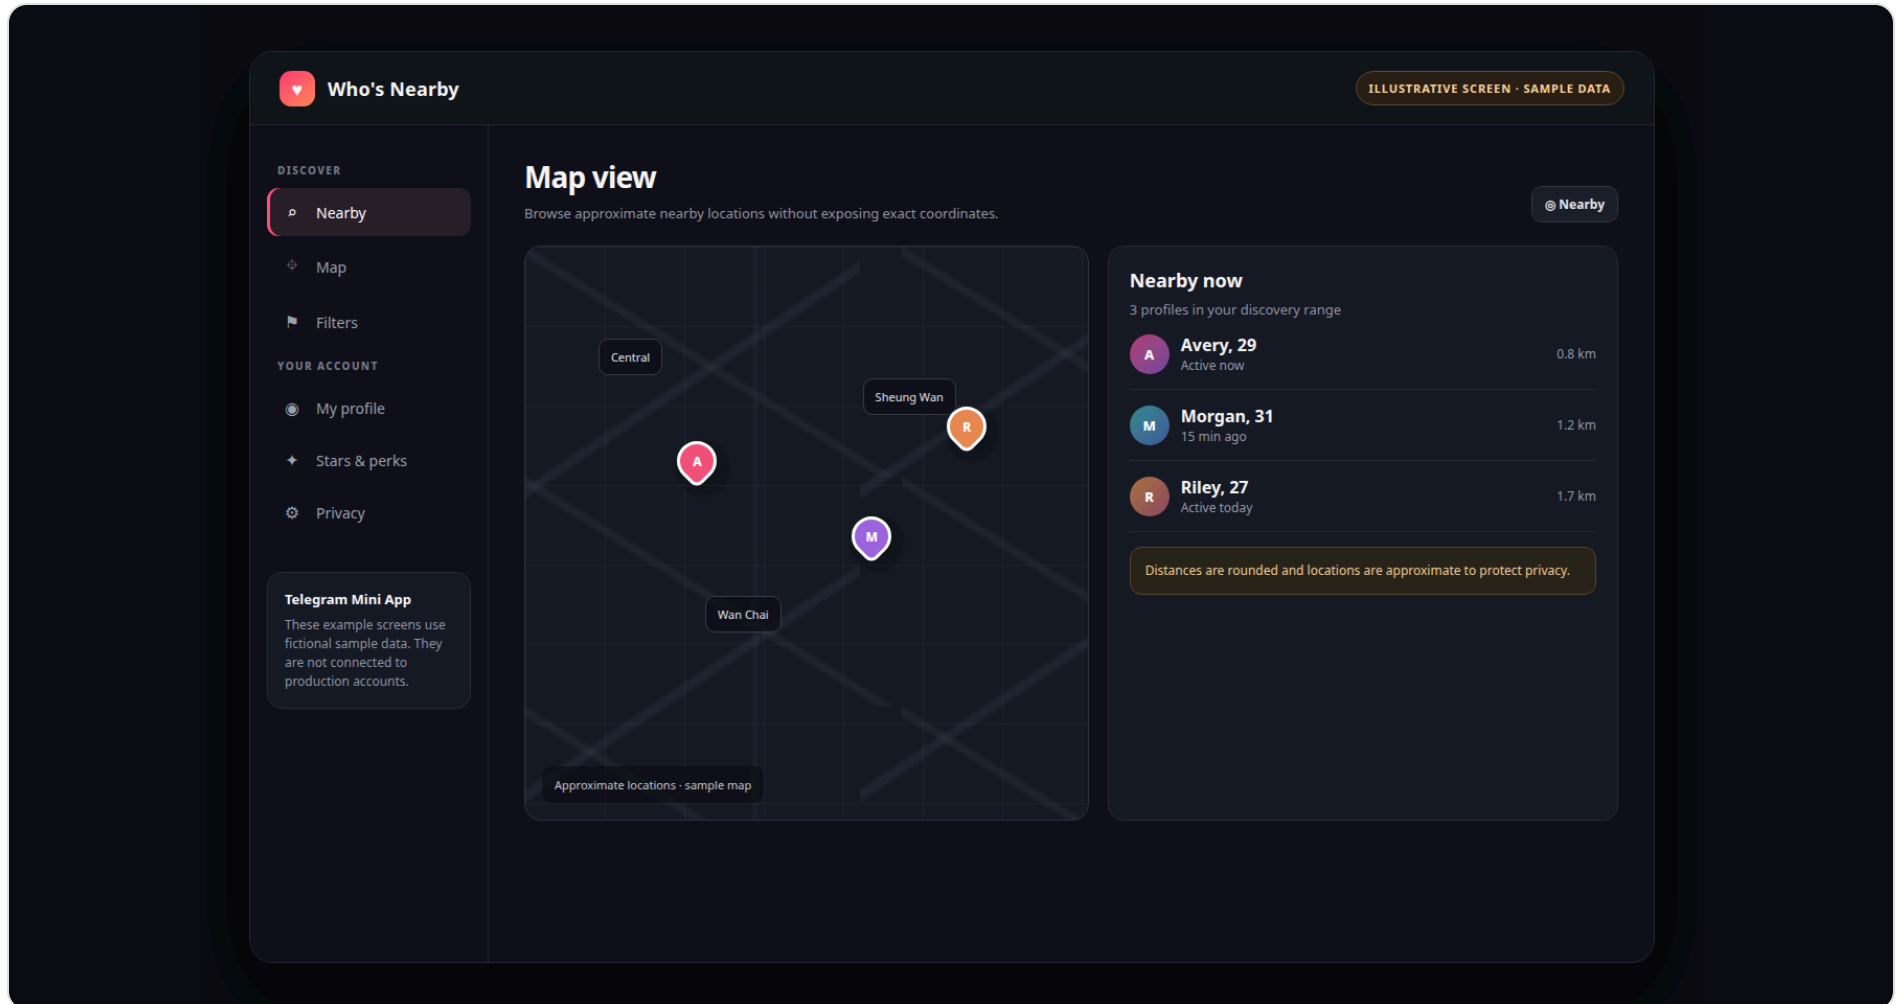

Fictional profile names and initials are used in this example.

## 02 • DISCOVERY

Illustrative • sample data

# Map view

Switch from cards to an approximate map view and browse nearby profiles without revealing exact locations.

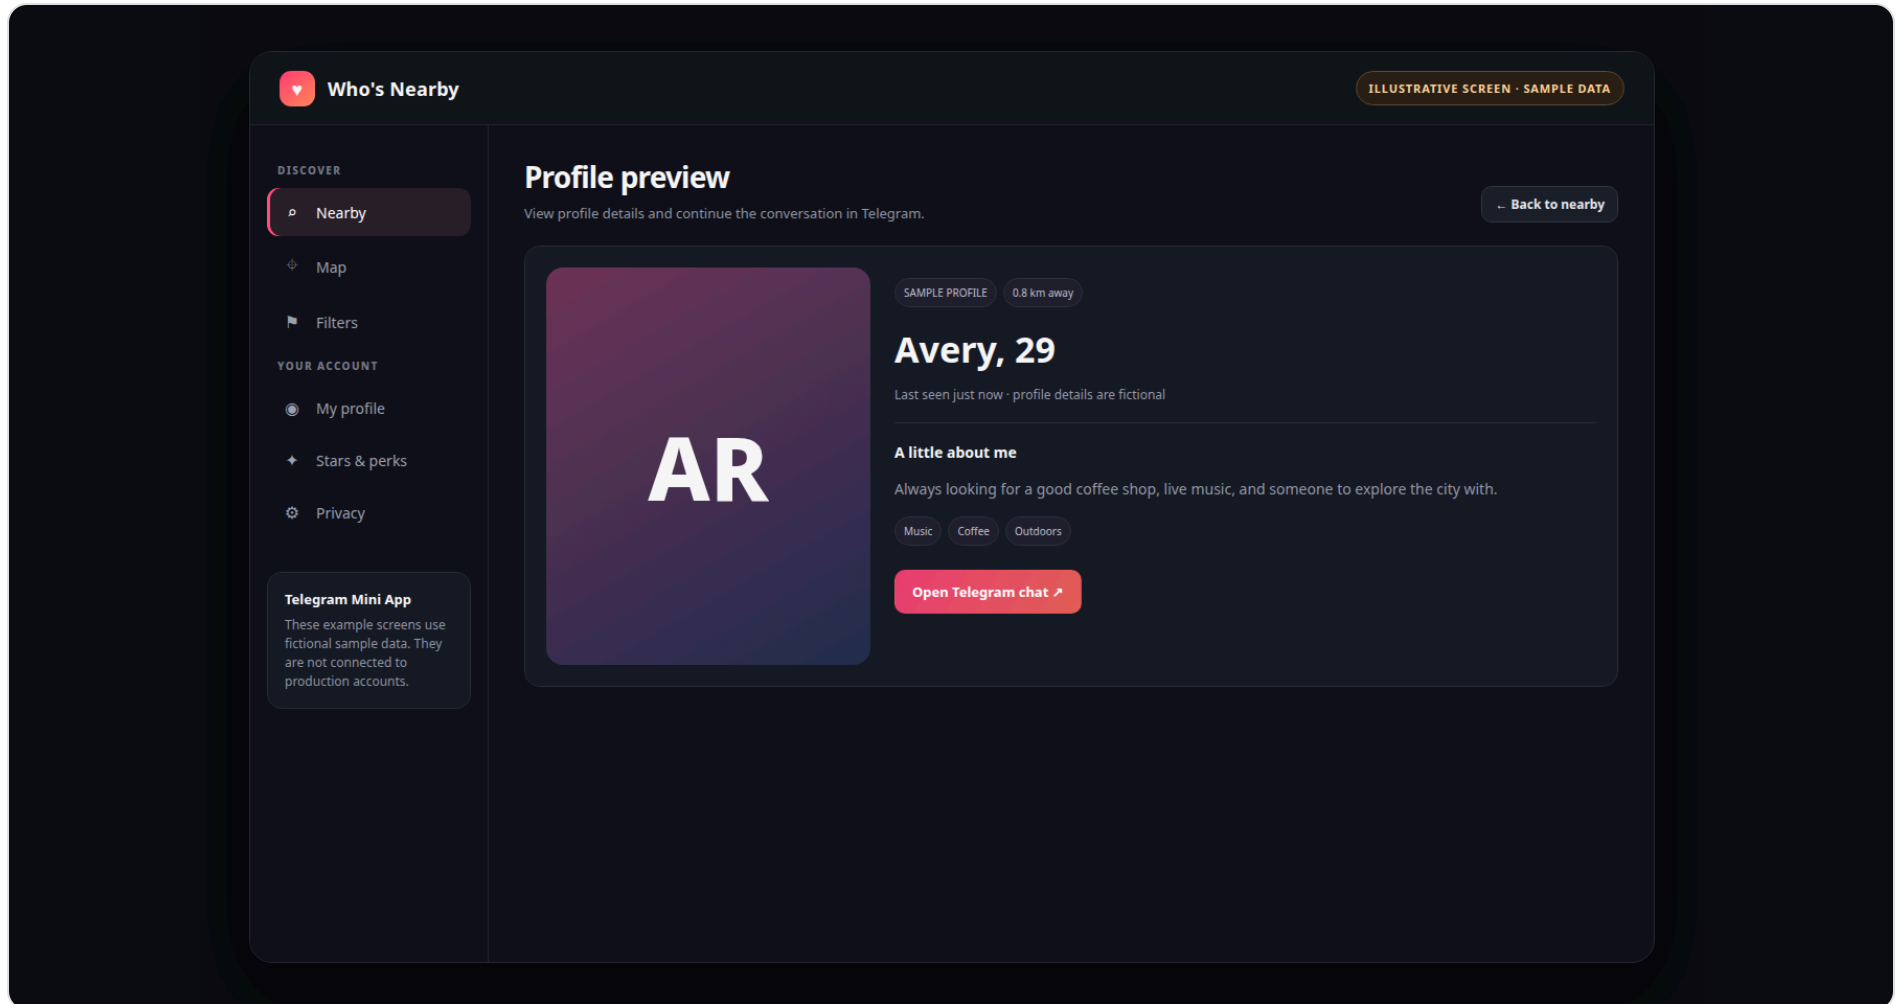

Locations and map markers are made-up examples and are not production coordinates.

## 03 • PROFILES

Illustrative • sample data

## Profile cards and Telegram chat

Review profile details and continue a conversation by opening the person's Telegram chat.

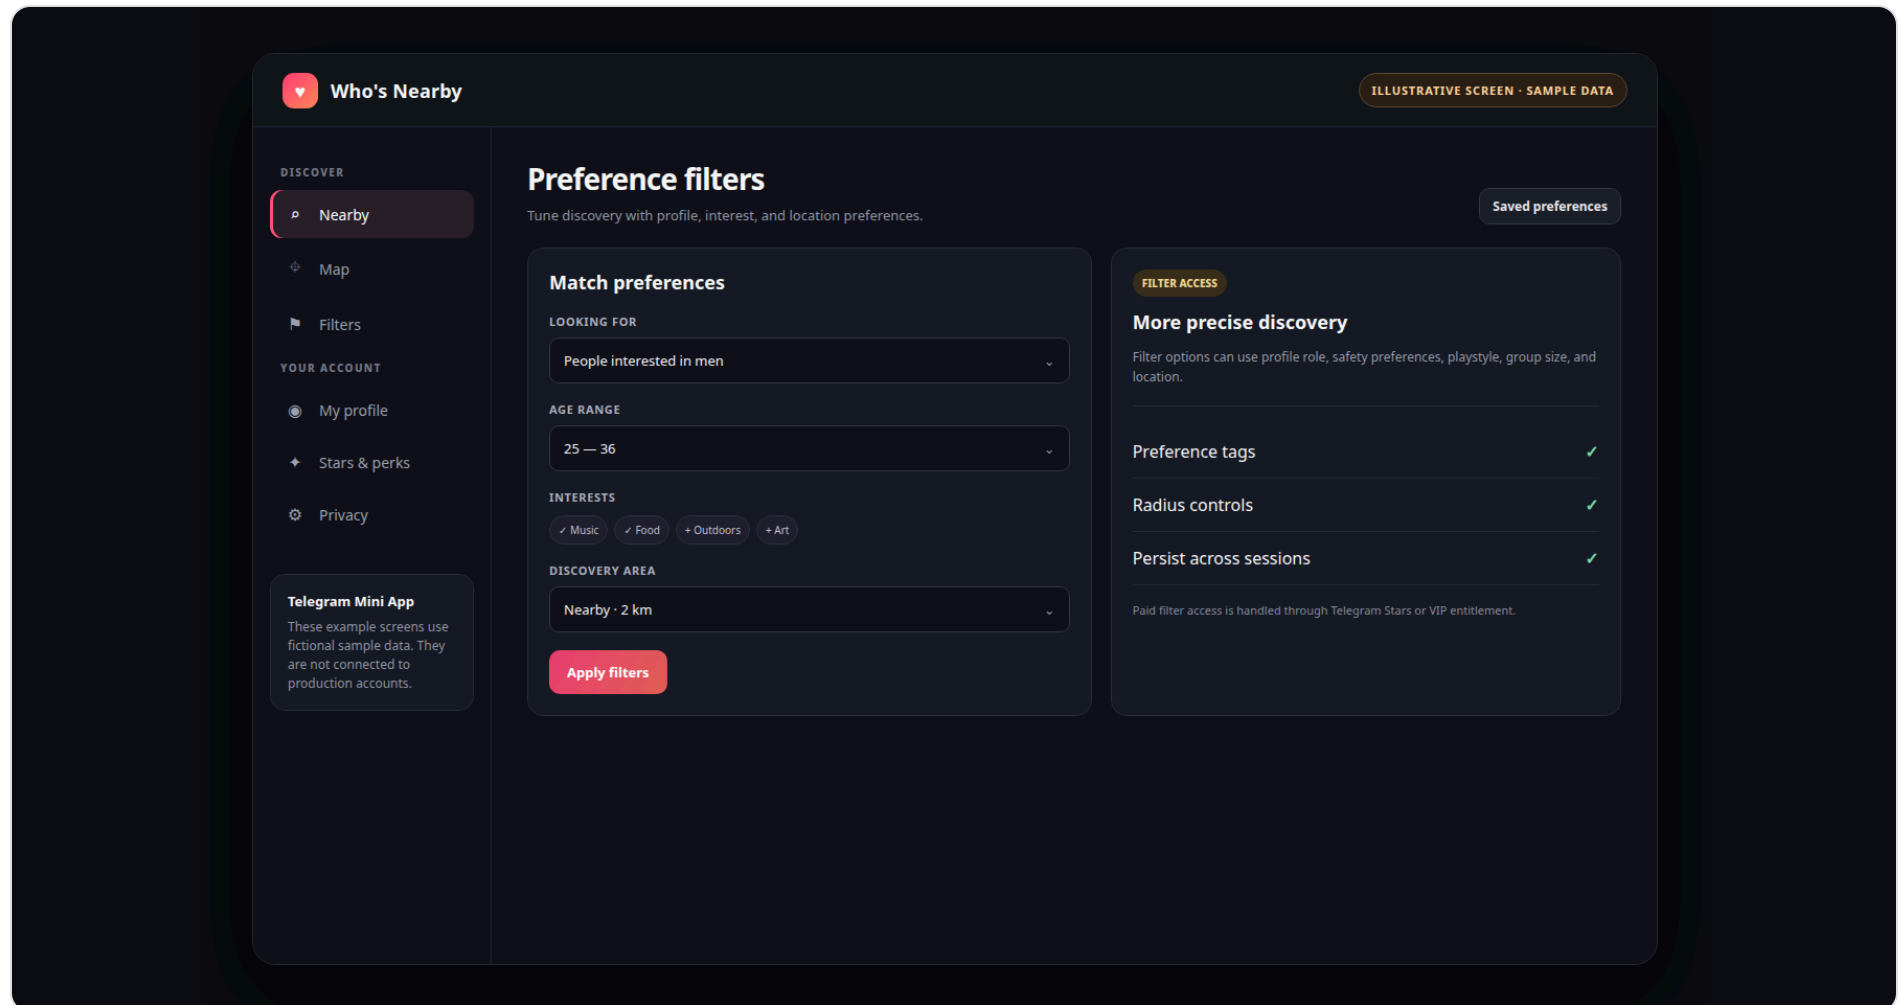

The sample profile is fictional.

## 04 • MATCHING

Illustrative • sample data

## Preference filters

Refine discovery with preferences such as profile role, safety, playstyle, group size, and location. Paid filter access is unlocked through an eligible subscription or VIP status.

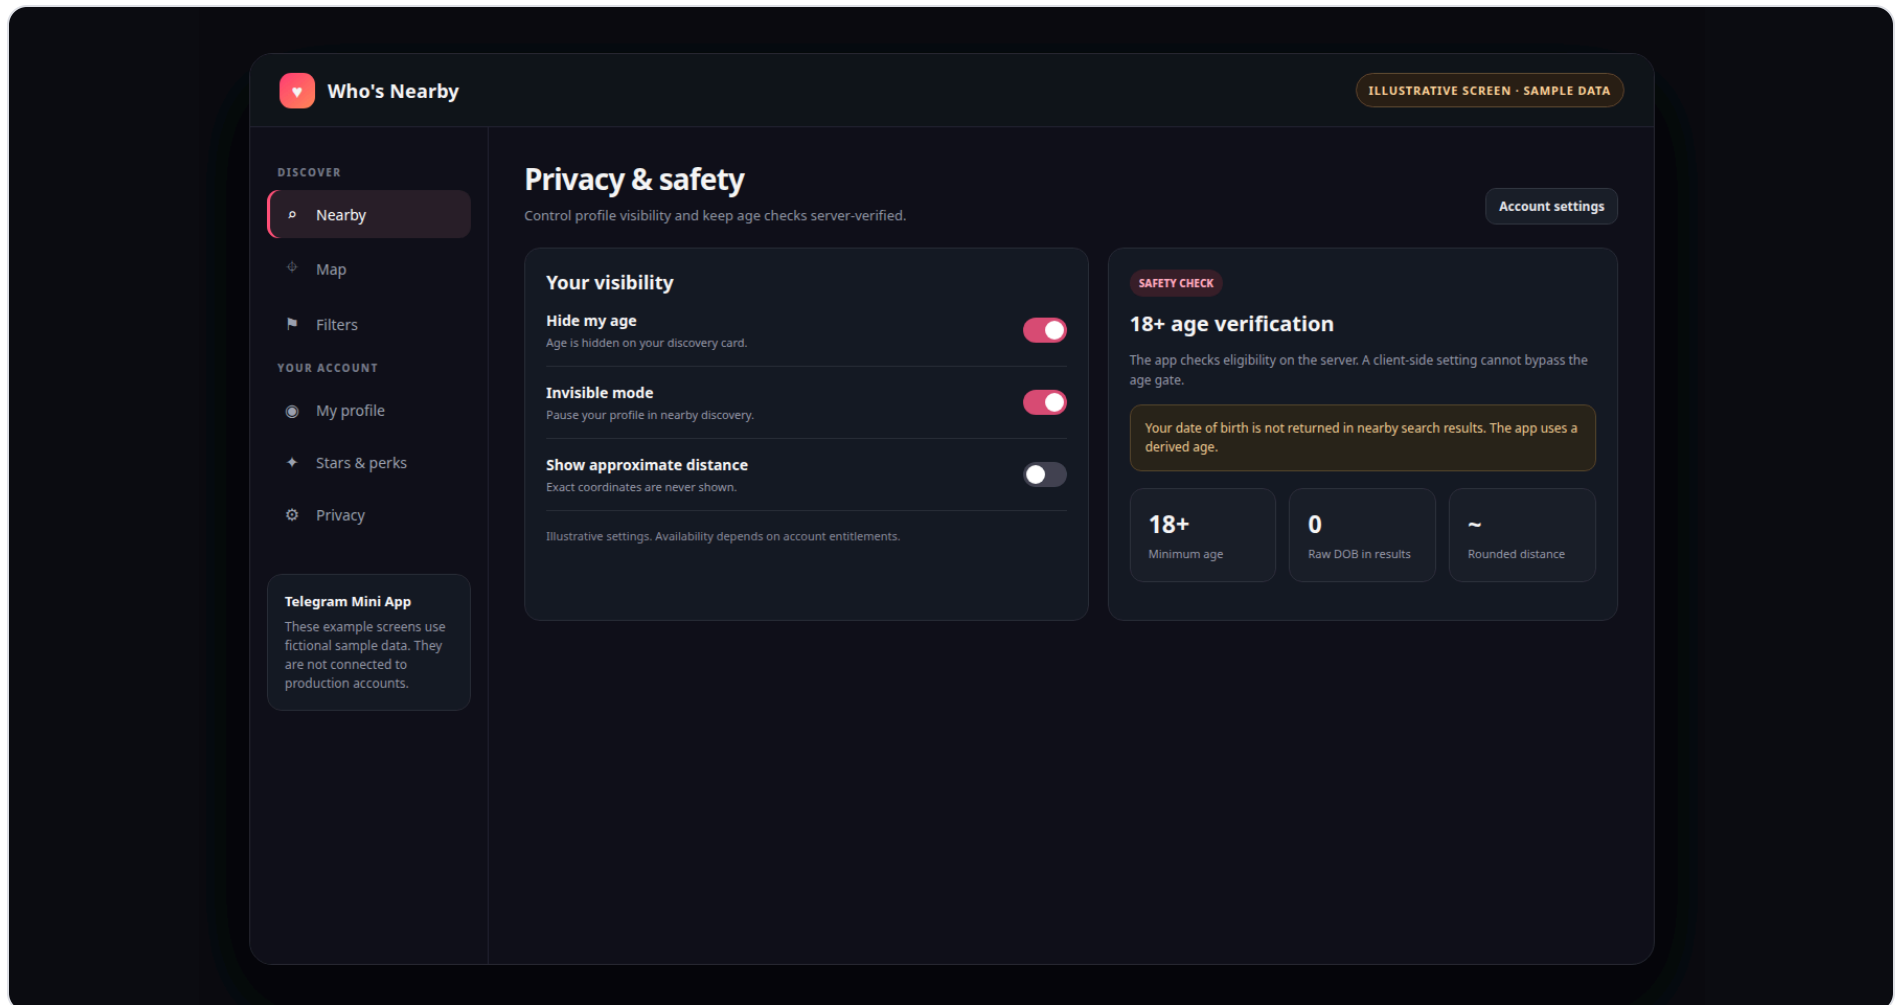

Filter labels are representative of the available preference controls.

## 05 • PRIVACY

Illustrative · sample data

## Visibility and age controls

Eligible accounts can hide age or use invisible mode. The 18+ gate is enforced on the server; nearby results use derived ages and rounded distances.

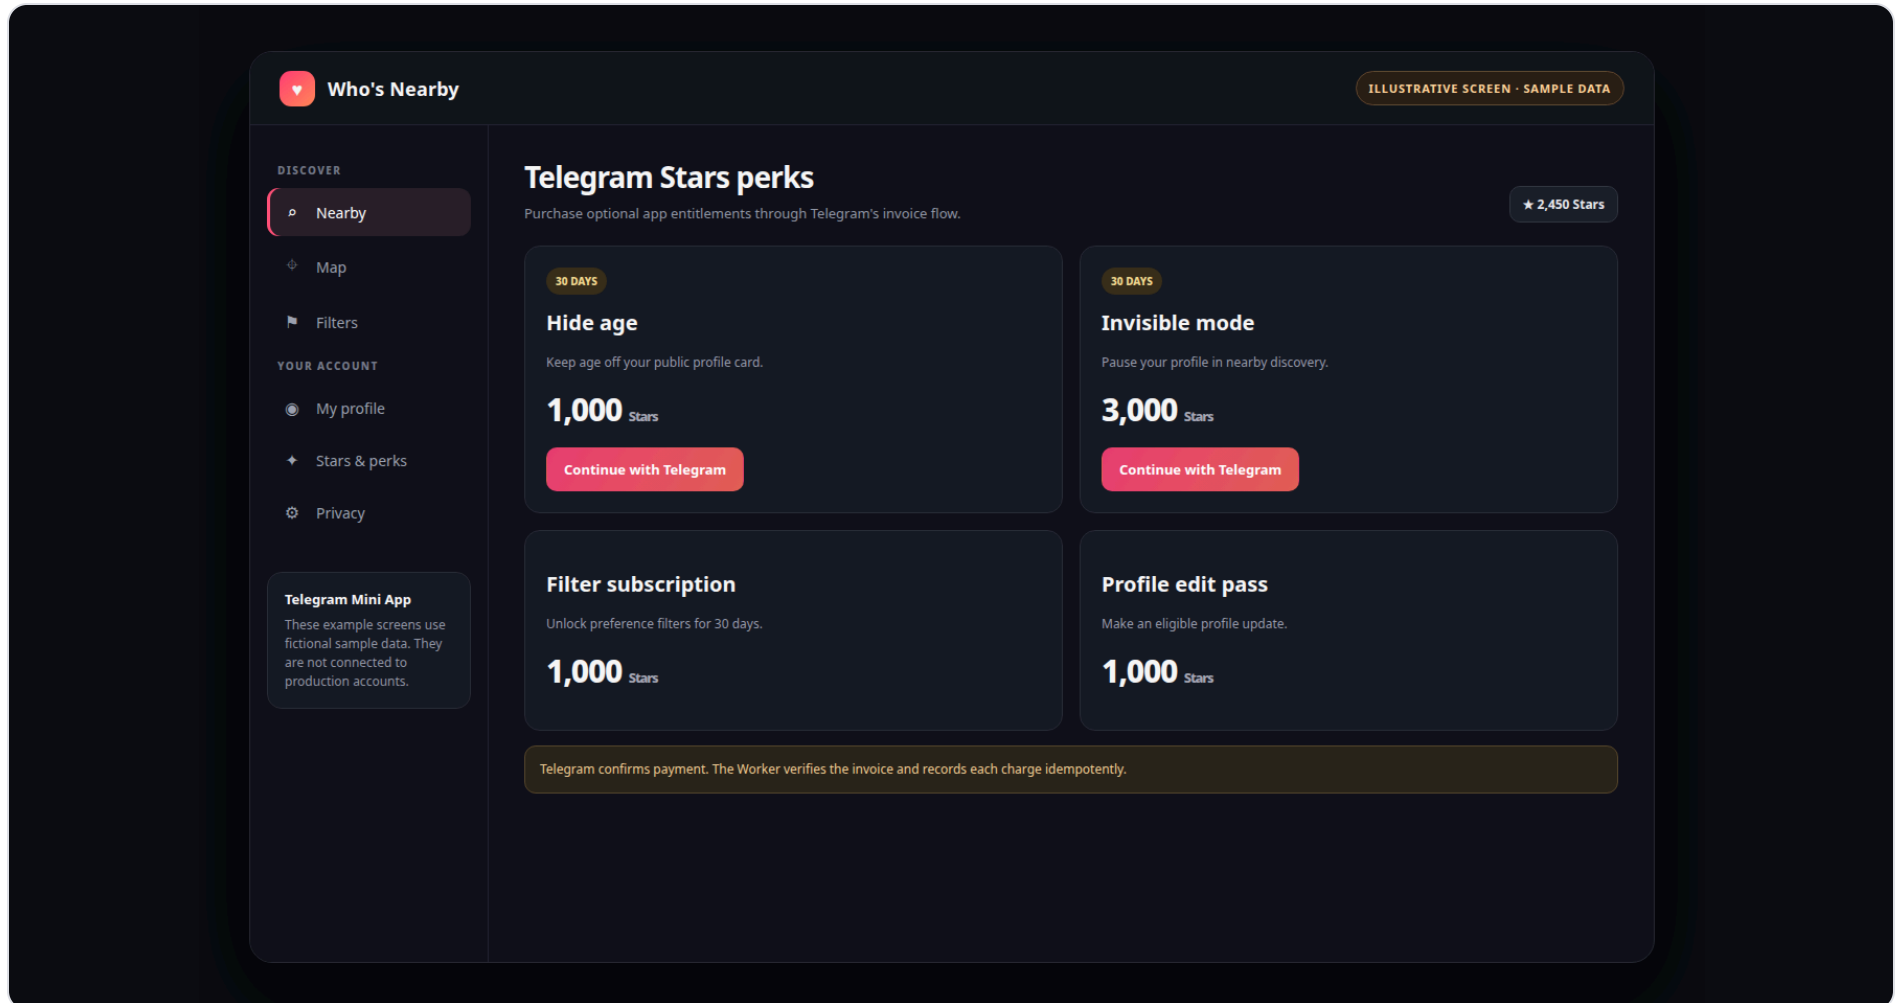

The controls shown are sample states and do not reflect an actual account.

## 06 • PAYMENTS

Illustrative · sample data

## Telegram Stars purchases

Optional app entitlements are paid through Telegram Stars invoices. The Worker validates payment updates and records each charge idempotently.

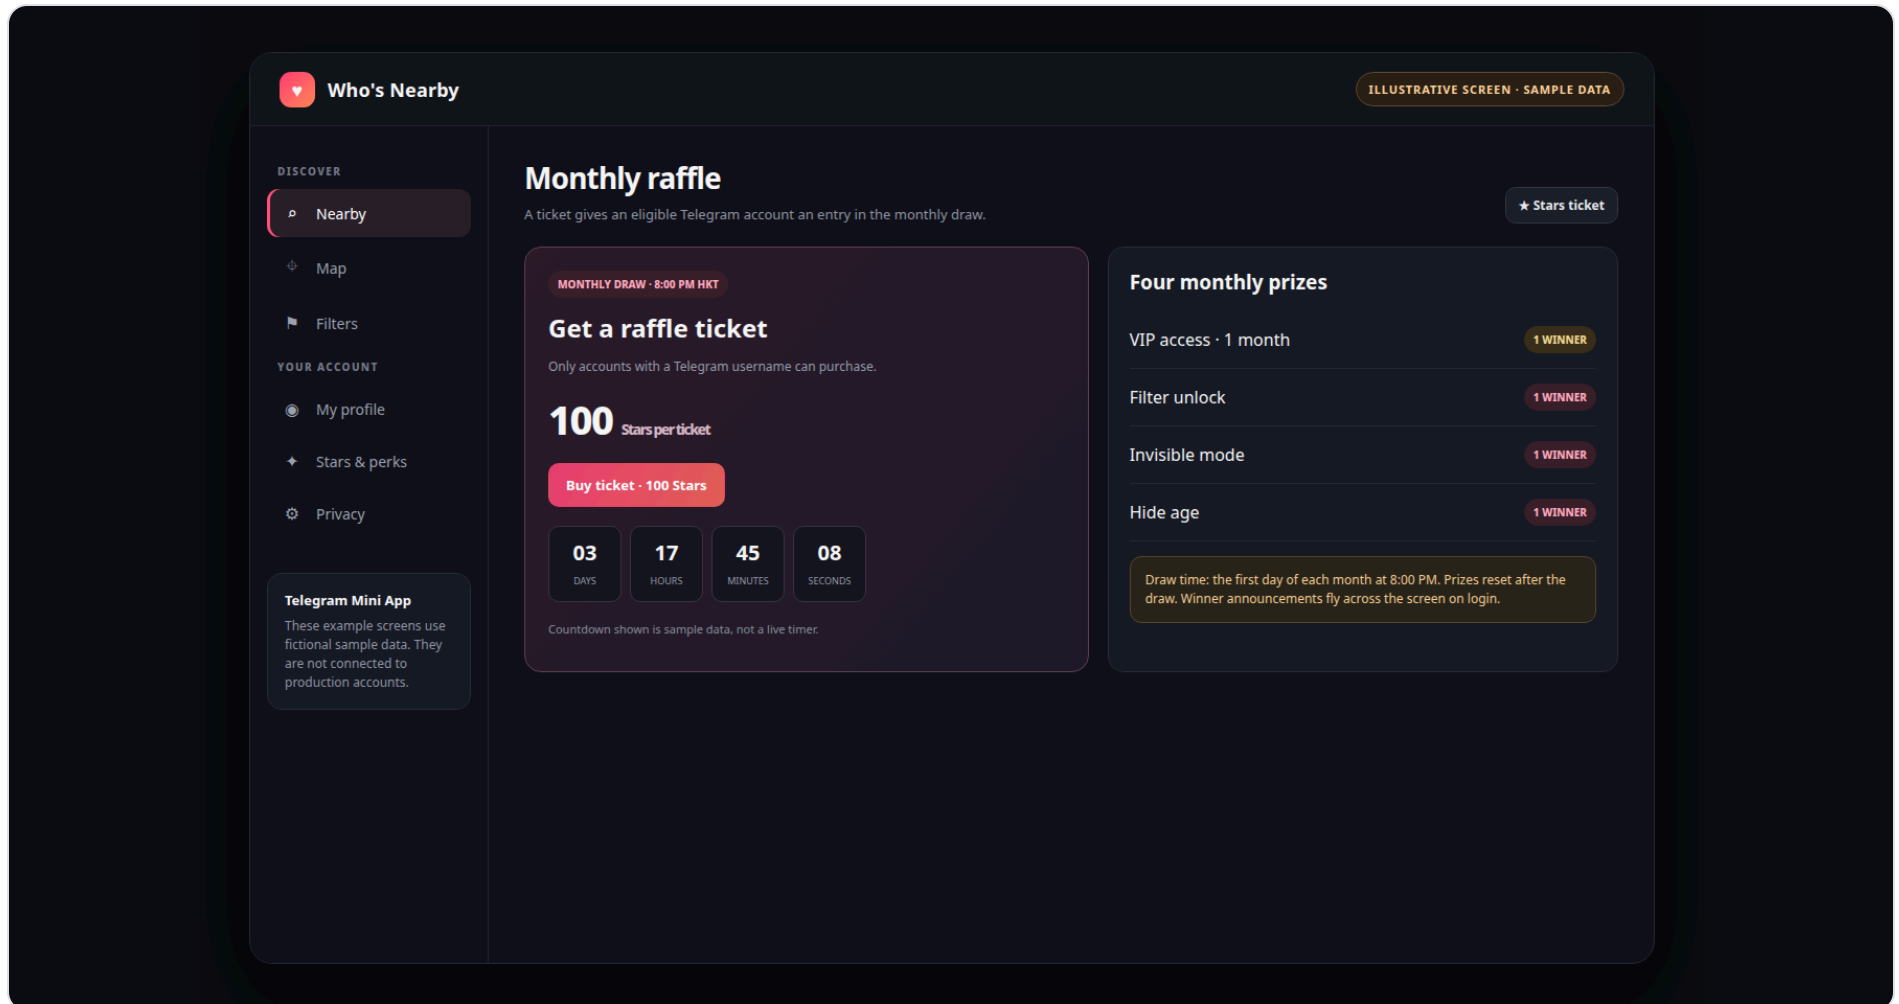

Prices shown are sample reference values; check the live in-app menu for current pricing.

## 07 · MONTHLY RAFFLE

Illustrative · sample data

## Raffle tickets and prizes

A ticket costs 100 Stars and requires a Telegram username. The draw runs at 8:00 PM Hong Kong time on the first day of each month. Four prizes are drawn: one month of VIP, filter unlock, invisible mode, and hide age. If fewer than four tickets are sold, one player receives VIP; if there are no tickets, the prizes do not carry over.

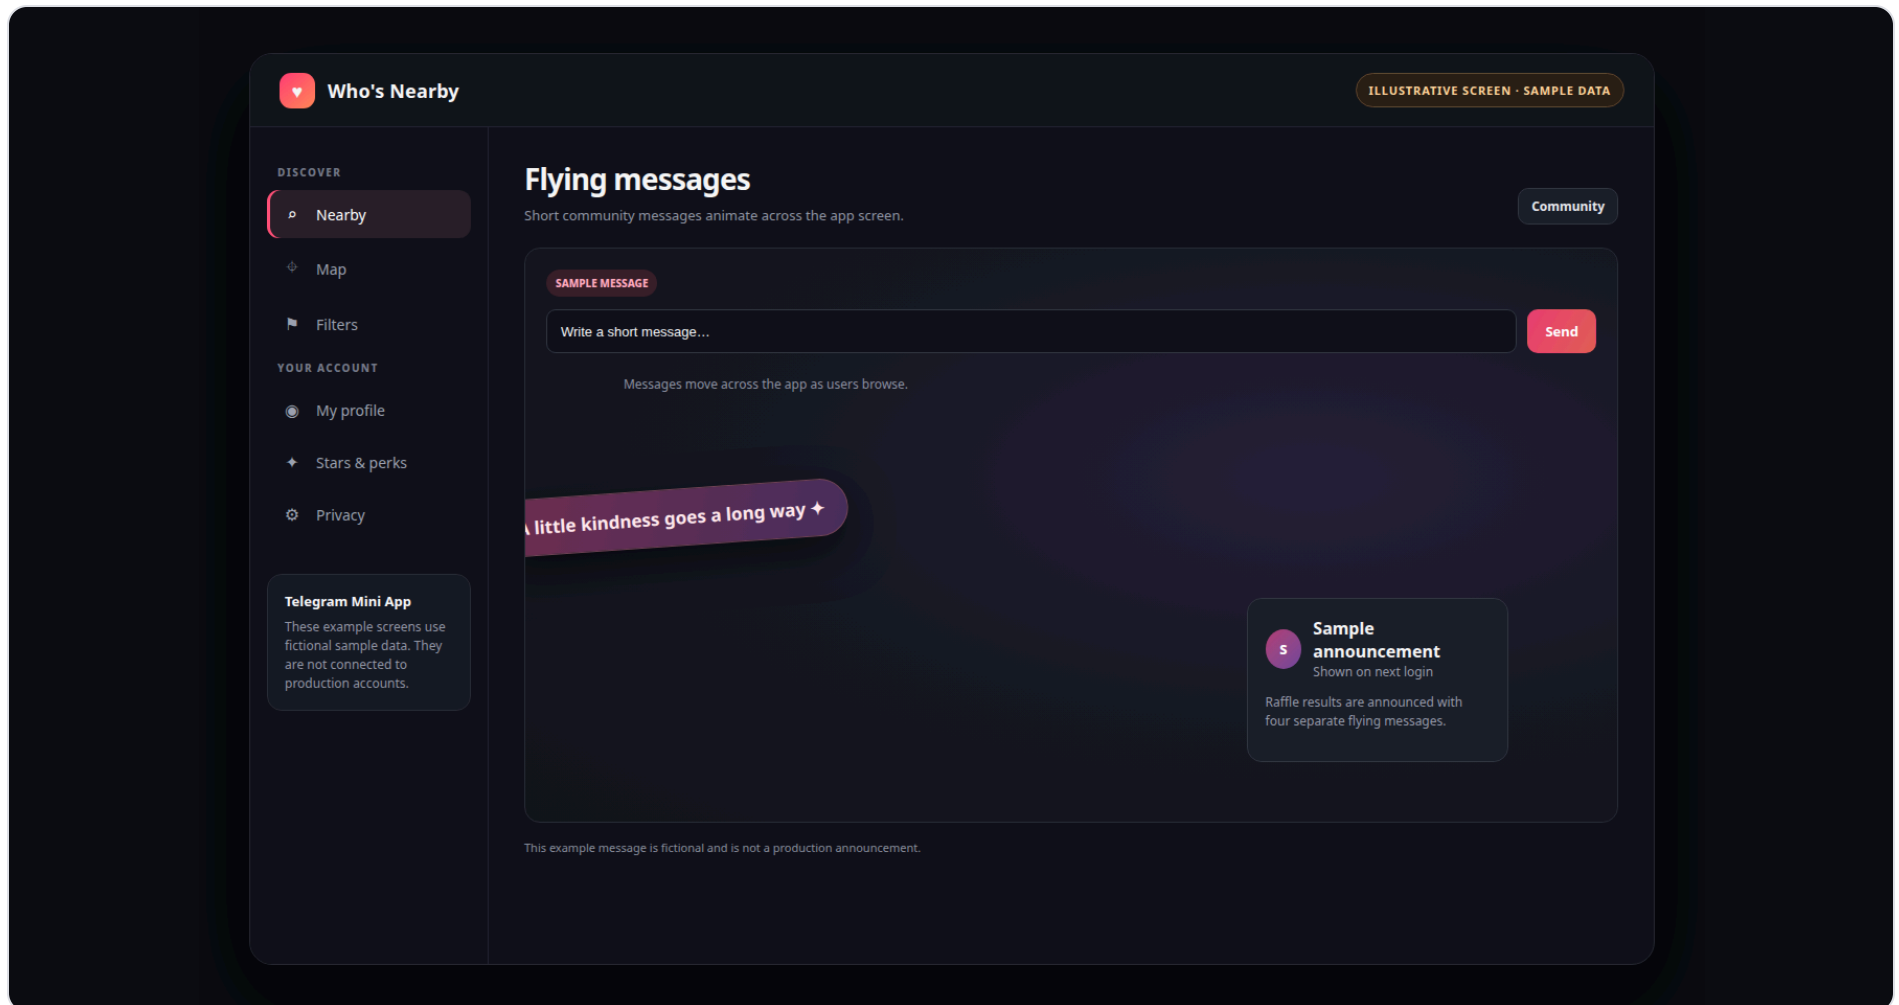

The countdown values are sample values, not a live timer.

## 08 · COMMUNITY

Illustrative · sample data

# Flying messages

Short community messages animate across the screen. Raffle winners are announced through four separate flying messages when users log in after the draw.

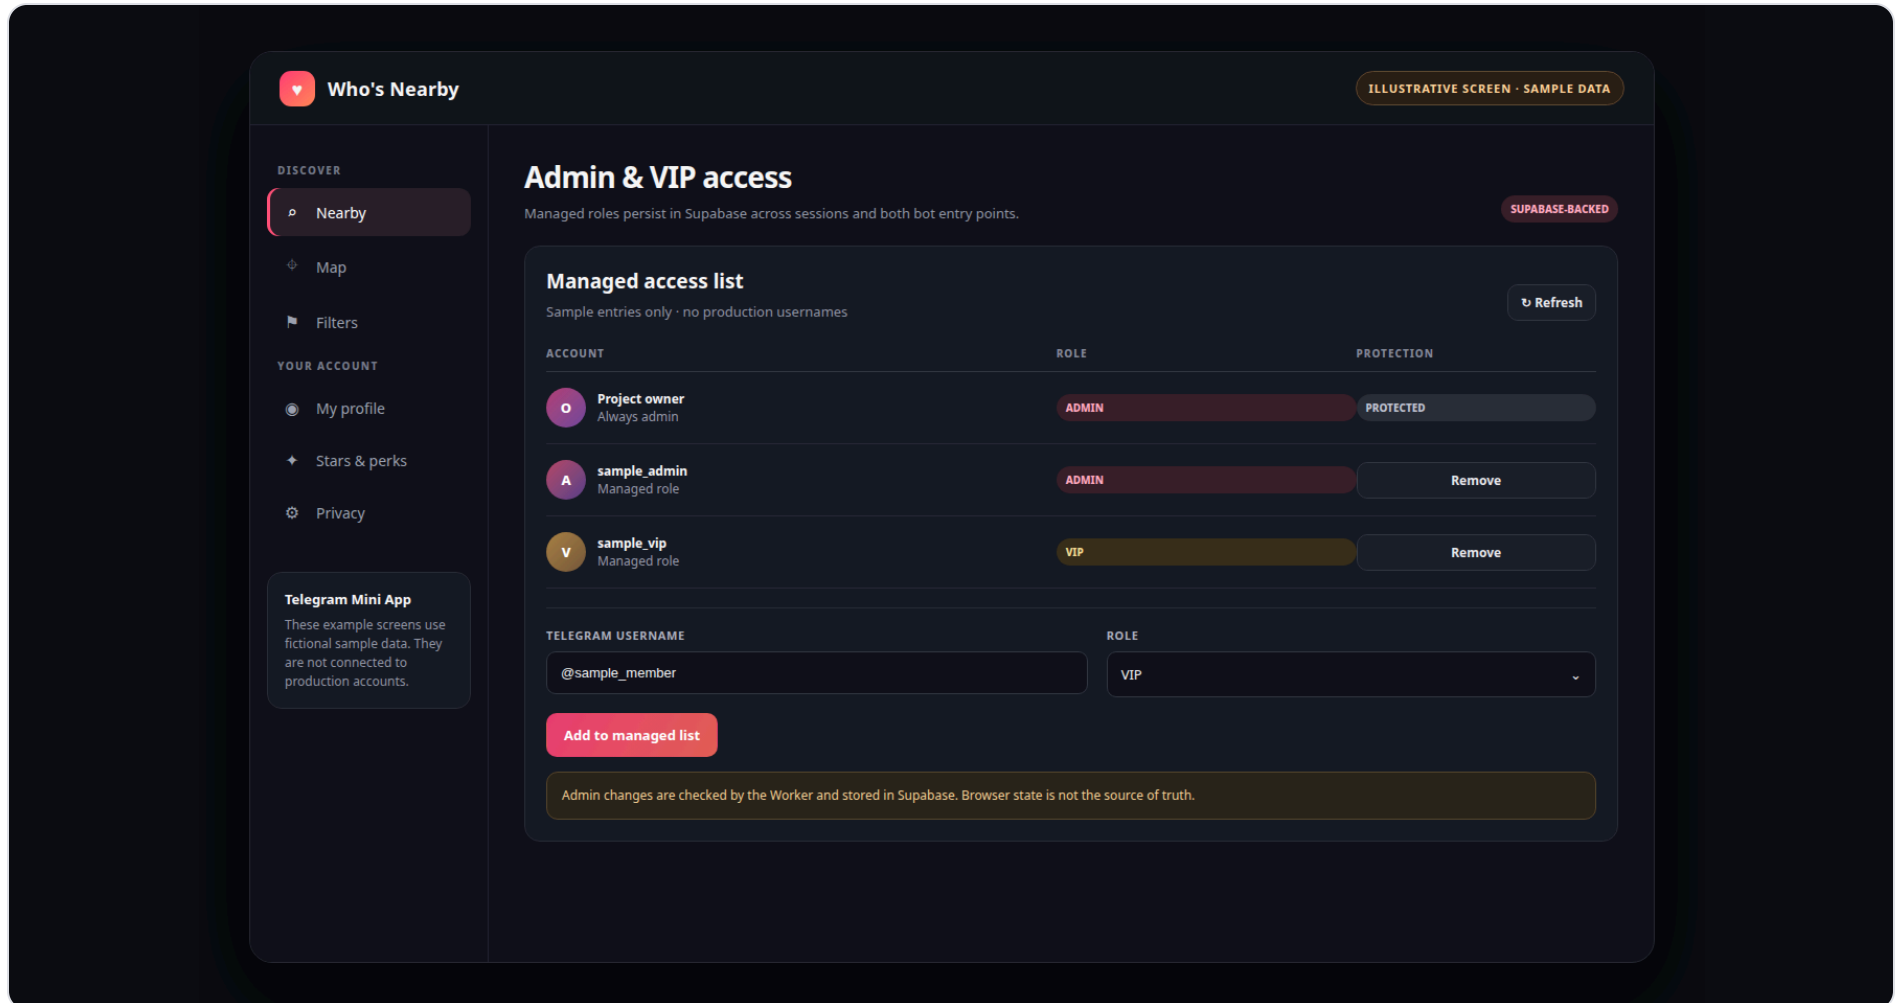

The sample message is fictional and is not a production announcement.

## 09 · ADMINISTRATION

Illustrative · sample data

## Supabase-backed admin and VIP list

The admin menu loads managed roles from Supabase. Admin changes are verified by the Worker and persist across sessions. The owner remains protected; VIP unlocks paid features but does not grant admin access.

Names are fictional placeholders; no production role list is shown.
